

Phase I (Weeks 0 – 6 after surgery):

- **Sling:** Only for comfort, discontinue as soon as able
- **Ice:** Use ice machine/system at minimum 3-4 times/day for the first week
- **Range of Motion:**
 - Pulleys 3-5 times/day
 - Pendulums
 - Elbow, forearm, and hand ROM unrestricted
 - Aggressive PROM and capsular mobility in all planes
 - Supervised PROM and capsular stretching at least 3 times/week
 - Initiate AROM when tolerated (no restrictions)
- **Exercises:** begin scapular stabilizers (protraction, retraction)
- **Modalities:** Per therapist, including electrical stimulation, ultrasound, heat (before), ice (after)

Phase II (Weeks 6+):

- **Range of Motion:** full AROM
- **Exercises:** continue Phase I; begin gentle rotator cuff strengthening; but avoid strengthening in positions of impingement
- **Modalities:** Per therapist, including electrical stimulation, ultrasound, heat (before), ice (after)
